

**SYSTEM AND METHOD FOR PREPARING RF DEVICES FOR  
DELIVERY AND VERIFYING DELIVERY INFORMATION**

**ABSTRACT OF THE DISCLOSURE**

RF devices used in financial and other transactions are moved sequentially to stations of a preparation device that prepares the RF devices for delivery to customers. At one station, an RF reader reads an identification code from the RF device and a label reader reads information on a mailing label. The read information is used to verify the mailing information to assure that the RF device is being delivered to the correct recipient.
